

How you will use this rubric

1. As a guide to help you complete your assignment.
2. As a guide for scoring your peers' work.
3. As a guide for your self-assessment.

How to complete your self-assessment

1. Read over the rubric carefully.
2. Evaluate your work related to each row. You will give yourself a score based on the criteria listed in each column. For example, when evaluating the **Requirements** (row 1), if you included **all (a total of 3) requirements**, you would give yourself a **score of 3** for that row.
3. Continue to score your work for each row.
4. After you determine your score each row, add your scores together and divide by **6** (total points possible) to determine your average for the assignment.
5. Have questions or need help? Reach out to other learners in the comments section for the assignment.

| | 0 | 1 | 2 | 3 |
|---|---|---------------------------------------|---------------------------------------|---------------------------|
| <i>Requirements (Subclass, different effects, different parts of the image)</i> | Missing three of the requirements | Missing two of the requirements | Missing one of the requirements | Meets all requirements |
| <i>Number of Image Effect Functions</i> | None | One | Two | Three |

Total Points Possible: 6
